Abstract (en)

[origin: EP1193188A1] The container (10) has a recess (13) in its surface with surface holes through which the product can flow. It has an absorbent applicator (14) of a fritted, foam or felt material on a hinged support (23) which allows it to be fitted into the recess to receive a dose of the product and be deployed to apply the product. The support is designed to seal over the recess when closed, and the body of the container has a catch to hold it in place.
