Abstract (en)
[origin: EP1193310A1] The present invention relates to composite detergent particles prepared by dry-blending detergent additive particles (a) comprising 30 to 100% by weight of two or more kinds of water-soluble substances, the detergent additive particles having an average particle size of from 150 to 600 μ m, a bulk density of 300 to 1000 g/L, and wherein the detergent additive particles have a dissolution rate of 90% or more, as calculated by the Equation 1; and detergent particles (b) having an average particle size of from 150 to 600 μ m and a bulk density of 300 to 1000 g/L, and comprising 10 to 50% by weight of a surfactant; and a granular detergent composition comprising 50 to 100% by weight of the composite detergent particles. Since the present invention has excellent fast dissolubility, it has excellent distributivity when pouring water to a dispenser of a drum-type washing machine, a fully automatic washing machine, or the like. <DF>Equation 1: Dissolution Rate (%) = $\frac{1}{T} - \frac{1}{S} \times 100$ </DF> wherein S is a weight (g) of the detergent additive particles supplied; and T is a dry weight of insoluble remnants on the sieve when an aqueous solution prepared is filtered with the sieve after stirring
