Abstract (en)
[origin: WO0105270A1] The invention relates to a toothbrush produced in a single-component or multi-component injection moulding process. Said toothbrush has a bristle-bearing front head section (2) and a handle (3). The handle (3) has, at least along part of its length, a substantially cylindrical, closed cavity (7) which extends in the longitudinal direction of the toothbrush. At least the section of the handle (3) which encompasses the cavity (7) consists of a material which is at least partially transparent. Aesthetically decorative elements can be placed in the cavity (7). The toothbrush can thus be configured in various ways, but in a cost-effective manner.
