Abstract (en)

[origin: WO0103778A1] The invention concerns a device (1) for jumping with successive leaps, comprising a tubular body (2) provided at one of its ends, called lower end, with foot-rest blocks (3, 4); a handle bar (8) provided with handles (81, 82) integral with the other end, called upper end, of the body; an impacting rod (5) designed to slide inside the body (2) and whereof at least a part is capable of being extended in the extension of the lower end of said body; elastic means for returning (14) the rod (5) towards an extreme extended position. The invention is characterised in that the device comprises means for braking (9) the impact rod (5) relative to the body (2) and means (83, 84) for manually controlling said braking means (8) provided on the handle bar (8).
