Abstract (en)

[origin: WO0168198A1] The invention relates to a device that comprises a lower part (1) mounted on the ski (3) and an upper part (2) that can be mounted on said lower part. The shoe (4) may be linked with the upper face (21) of the upper part (2). The lower part (1) comprises a base (13) mounted on the ski body (3) and being insertable into a correspondingly shaped middle section (23) of the upper part (2). The base (13) is held in said middle section (23) by means of connection devices (35). Between the base plate (10) and the ski body (3) the middle section of a flexible member (60) is held. Said member (60) and its support on the ski are adapted to have the effect of a brake that engages automatically.
