Abstract (en)
[origin: US6618946B2] A hand-held jack-knife according to the invention essentially comprises a blade and a handle articulated around an axis of rotation. This articulation is formed by a hollow bush the axial opening thereof passes completely through the handle and which is fixedly secured in rotation to the handle. The blade can be operated by means of knobs. A stop catch may be formed by a tab, the free end of which may engage in housings of the bush-knob system. This knife finds its application in the fields of, for example, mountain climbing, pot-holing, deep-sea fishing, water and aerial sports.
