Abstract (en)
[origin: WO0185462A1] The invention relates to a self-inking stamp with overshoot inking, comprising a lower section (1), which may be applied to the surface to stamp, an inking cushion, arranged in an exchangeable holder (3), which may be inserted into a mounting shaft (8) and a turning mechanism. Said turning mechanism is for a print plate support which may be moved back and forth with simultaneous turning and which is arranged in the lower section, between the inking cushion and an applicator frame (5). The invention further comprises an operating upper section (6), which may be displaced against the force of a spring, relative to the lower section, whereby the inking cushion holder on the upper side thereof is provided with at least one groove (7), extending in the direction of displacement, into which a rib (9) on the upper side of the mounting shaft positively engages.
