Abstract (en)
[origin: WO0100857A1] The invention relates to delivery systems for heterologous antigens. Chromosomal loci within rRNA operons such as those of the 16S or the 23S genes have been identified as useful sites for the integration of nucleic acids into the chromosome of *Vibrio cholerae* bacteria. A particularly useful regulatory sequence for the direction of high level expression of heterologous antigens in this bacterium has been identified as the *OmpU* promoter.
