Abstract (en)

[origin: WO0102665A1] A device for fixing and fastening an insulating and/or protective covering or supports for various devices on top of a roof or similar, consisting of juxtaposed corrugated plates (1) of cement-fibers or a similar material, whereby said plates are not pierced. The inventive device is characterized in that it comprises a plurality of support plates (2) which can be arranged on the side edge (4) of at least one corrugated plate between at least two successive corrugations (13,14) thereof, whereby each support plate is provided with at least two parallel engaging slits (6,7) in which the edge section of the edge of the plate is engaged and connecting means are provided between the plate and the covering.
