Abstract (en)
[origin: WO0077323A1] Description is given of an arrangement of a working platform (16) which is suspended in a superjacent support construction, such as a ceiling construction, tier of beams or the like, with the working platform (16) being connected to the support construction by being mounted to a yoke construction (26), and that the platform (16) is arranged so that it can be raised or lowered in relation to the yoke construction. The arrangement is characterized in that the yoke construction comprises one or more extendable rods (40, 42, 44, 46), and with a given force can be brought to abut a superjacent support construction (12, 14) to in this way stabilise the relative position of the yoke construction/platform.
