Abstract (en)
[origin: DE19932078A1] The invention concerns a pumping device for discharging large amounts of liquid, comprising at least two pumps forming each an individual unit. Said two pumps are mutually connected to a discharge pipe on the discharge side, and are coupled to a common powering unit. The inventive device aims at improving a known device, described above, so as to produce an easily transportable device. To achieve this, at least one of the pumps (4) is arranged in a vertical plane away from the plane wherein the other pump (5, 6) is arranged.
