Abstract (en)

[origin: WO0072181A2] An integrated medical information management system includes at least one on-line central server and at least one remote access terminal. The at least one on-line central server contains patient related data for at least one patient. The at least one remote access terminal is used to interactively access the patient related data for the at least one patient from the at least one on-line central server to generate interactive reports based on the patient related data for the at least one patient on the at least one remote access terminal. Preferably, the at least one on-line central server is connected to the at least one remote access terminal through an Internet connection and utilizes an internet web browser to interactively access the at least one on-line central server.
