Abstract (en)

[origin: EP1195100A1] Footwear comprising an upper (11), an insole (19) and an outsole (21) in which the upper (11) is comprised of an outer material layer (13) and a waterproof functional layer (15) that covers the outer material (13) at least partially on its inside, and having an upper end region on the sole side that is comprised of an outer material layer end region (23) and a functional layer end region (25), said functional layer end region (25) having a projection (27) extending beyond the outer material layer end region (23). A spacer strip (29) is connected on one side to the outer material layer end and on the other side to the end of the functional layer end projection (27), such that it covers the projection (27). Said functional layer end region (25) and said spacer strip (29) are located at and attached to the underside of the insole (19) by lasting adhesive (25). A gasket (37) is adhered to the underside of the insole (19) and of the spacer strip (29) in a manner which results in a waterproof zone at least in the area of the spacer strip (29). Said outsole (21) adhered is attached to the underside of said gasket (37) by an adhesive. <IMAGE>
