Abstract (en)

Consisting of providing inner segment (1) of the guide, which is meant to attach to the car structure, with a E-bar such that in its middle arm (2) are established rolling tracks (3) which relate said inner segment to intermediate segment (4), which adopts a U-shaped configuration and receives within it middles arm (2) of the interior segment (1) through respective top and bottom sets of balls (12), while on the intermediate segment (4) is mounted external segment (8), also U-shaped, such that its side arms (9) are considerably near the top and bottom arms of inner segment (1), establishing with it a type of cage which encloses and protects all the rolling mechanisms. <IMAGE>
