Abstract (en)

[origin: EP1195305A1] The hood (1) is moveable between open and closed positions. When leaving a station, the hood is moved into a third closing position (20), between the first two positions. A hand grip (5) operated by a the occupant (2) is moveable in front of its main axis, so that the occupant can close the hood from a physically favorable position. An actuator (8) is hinged with one end (7) to the hood and acts with a guide unit located in the station, to move the hood from open to intermediate closing position.
