Abstract (en)

[origin: EP1195537A1] The couplings are positioned next to each other, and are separated by a coupling rail (10) fastened to the coupling housing (1). Two piston-cylinder units (21) for operating the couplings are also positioned next to each other and separated by the coupling rail, between friction discs (12,13) and input shafts (18,20), on a smaller diameter than the friction discs. Rail and housing are connected to each other via coupling hub (8) and cover (7) of the housing.
