Abstract (en)

[origin: EP1195648A1] An electrophotographic photoreceptor including at least an electroconductive substrate, a photosensitive layer formed on the substrate and a protective layer formed on the photosensitive layer and including a binder resin, wherein when a solution in which the binder resin is dissolved in an organic solvent incompatible with water is mixed with deionized water having an electroconductivity not greater than 1 mu S/cm and substantially the same weight as that of the solvent while agitating, the water has an electroconductivity not greater than 2 mu S/cm.
