Abstract (en)

[origin: US2002105131A1] The present invention relates to a method and a device for arranging at least two sheets in a shingled mode of arrangement, wherein a first sheet is moved in a paper travelling direction, and a second sheet is simultaneously moved in a direction at an angle relative to the paper travelling direction in such a way that the at least two sheets are slid one on top of the other. Alternatively, the first and the second sheet are moved in a first and in a second direction at respective different angles relative to a paper travelling direction. Another alternative is to move the two sheets in a first and in a second direction at different speeds but at identical angles relative to the paper travelling direction.
