Abstract (en)
[origin: GB2351501A] Detergent compositions or components comprise certain hydrophibically modified cellulosic materials, which provides protection of fabrics, whereof at least 80% or even at least 90% has a particle size of below 1000 microns or even below 850 or even 710 microns. Selection of material of this particle size results in improved dispersion of the cellulosic material and imparts improved appearance and integrity benefits to fabrics and textiles laundered in washing solutions formed from such compositions.
