Abstract (en)  
[origin: WO0188454A1] An automotive condenser (26) system (particularly for an automotive air conditioning or refrigerant system) has a refrigerant flowpath and a liquid coolant flowpath in thermal heat transfer contact with the refrigerant flowpath. The condenser (26) is typically the primary condenser (26) used in an automotive air conditioning or refrigerant circuit (27) to dissipate heat from the refrigerant. This enables a conventional, larger, "air flow" condenser to be replaced.
