Abstract (en)

[origin: WO0106675A1] Module (3) for connection and testing of high frequency transmission lines, characterised in that the module (3) includes an earthed electrically conductive (preferably metal) shield (1), which covers one side of the module sufficiently to act as a barrier against inductive effects between two or more such modules when arranged adjacent to each other (for example in an array of such modules in a connection box) with the shield between them.
