Abstract (en)

[origin: DE19837361A1] One end (16) of the web (01) can be coupled to an intake member (07) by a reinforcement part (03) which is connected to the end of the web by positive locking means, such as followers provided on the side of the reinforcement facing the web and penetrating through the latter. Counter members can be provided so that the web can be clamped between the reinforcement part and the counter member. The reinforcement part can be looped round circumferentially by a layer of printing web.
