Abstract (en)
[origin: EP1197641A2] Operating device for fixing a camshaft of a driving motor of a vehicle, preferably a motor vehicle, in a starting position adjusts the camshaft in its starting position using forced control. Preferred Features: The camshaft is hydraulically adjusted into its starting position. The device for adjusting the camshaft has a solenoid valve (21) controlling the flow of a pressure medium, preferably hydraulic medium. A rotary slide valve of a camshaft adjuster is operated by the device. The rotary slide valve connected to the camshaft so that it does not rotate has at least one piston impinged upon on both sides by the pressure medium.
