Abstract (en)
[origin: EP1197709A1] This invention relates to air extraction apparatus (1). The air extraction apparatus (1) may be particularly, although not exclusively, suitable for extracting cooking vapours from above a cooking area. The apparatus includes a body (2) having an air inlet (3) and an air outlet (4), and also includes mounting means (5) for retaining the body (2) above an area. The arrangement and construction is such that the body (2) is able to move or pivot laterally with respect to the mounting means (5). The mounting means (5) may preferably include a flue which may preferably be fixed, or adapted to be fixed, to a wall adjacent the area. <IMAGE>
