Abstract (en)
[origin: WO0102281A1] The load handling apparatus comprises at least one first elongate member (3) having means for engaging a load and at least one second elongate member (10) pivotally connected to said first-mentioned elongate member. An airbag (9) cooperating with said first and second elongate members changes the angular orientation of said first and second elongate members relative to each other upon inflation/deflation of the airbag.
