Abstract (en)
[origin: DE19937230A1] The invention relates to a recombinant chimeric protein comprising a) a first domain with a nucleic acid synthesis activity and b) an interaction mediating sequence, whereby said interaction mediating sequence can form a complex through the nucleic acid synthesis activity and a slide bracketing protein. Said complex is different from the complex formed through the nucleic acid synthesis activity and/or the slide tying protein with their natural interaction partner(s).
