Abstract (en)  
[origin: WO0111069A1] A process is described to enable the successful transfection of cells with lipid complexes in the presence of serum. The process involves subjecting a lipid complex to one or more freeze/thaw cycles and then bringing the freeze/thawed material into contact with cells either *ex vivo* or *in vivo*. The lipid complex may be any anionic, cationic or neutral lipid complexed with one or more other bioactive materials such as nucleic acids.
