Abstract (en)

[origin: WO0101194A1] The invention relates to a device for displacing 3-dimensional objects in the projection area of a projection system, comprising a turning platform (600) and a conveyor incorporated into said turning platform (600). The invention is characterized in that the turning platform and/or the conveyor comprises sensors for determining the displacement of an object located on the turning platform or conveyor and the conveyor and/or turning platform is controlled or adjusted by means of a control/adjustment device according to the detected displacement of said object.
