Abstract (en)

[origin: EP1199136A1] A high-pressure pump (3) conveys the carrier fluid (1) into a main pipe (6) with choke (8), and into a parallel subsidiary pipe (7) which leads through a pressurized container (10) back into the main pipe the end of which has an ejector-nozzle (11). A filler-container (18) for abrasive material (9) is above the pressurized container and is joined by a down-pipe (19) to the pressurized container. The down-pipe and discharge pipe (24) can be blocked (21,20;25).
