Abstract (en)
[origin: EP1199142A2] The upper half (4) of the molding appliance has a filler gap for concrete; while the lower mold-half (1) which is positioned on rubber-mounted vibrator supports (2) with vibrators (3), has a groove for the lengthwise adjustment of the pipe. The inliner pipe is centered by a sleeve-centering device (7,8,9,10) and pointed-end centering device. The sleeve-centering device consists of a sleeve fixed on a frame to a sleeve-container.
