Abstract (en)
[origin: EP1199420A1] The invention is a new modular element for the construction of floors, comprising a surface shaped in such a way as to form a series of domes (1) positioned side by side, wherein the common areas between adjacent domes are arched downwards until reaching the lower surface of the new modular element. The edges (1.4) of the domes along the sides of the modular element are U-shaped, in such a way as to permit the reciprocal fitting of each modular element being laid with the modular elements that have already been laid. <IMAGE>
