Abstract (en)

[origin: WO0103553A1] The present invention is a disengageable self-locking pivotal bracket device (10) that can be used as a foldable, pivotal connecting element that can connect two members (12, 14), for example a fish net (62) and handle (60), or two sections of a cane. The device includes an axial/fastener and disengageable locking element for pivotally and releaseably locking the device (10) into and out of at least one extended, engaged position. The device (10) further includes a stop (52) which contacts one of the members to limit pivoting in a first direction.
