Abstract (en)
[origin: WO0102623A1] The invention relates to a method for the fabrication of products to improve the working characteristics of a product. Said method is characterized in that the basic treatment of an aqueous suspension of an ultradispersed diamondlike carbon cluster is carried out in an aqueous sulfuric acid or hydrochloric acid solution before applying the coating and in that the acids are subsequently washed off in distilled water. The technical result of said method is an improved operating characteristic curve of the product using smaller amounts of the costly product UDA.
