Abstract (en)

[origin: FR2796662A1] The safety barrier has at least one of its rails (20) made from timber such as Douglas fir 18 cm in diameter, reinforced with synthetic fibres. The timber rail is cut lengthwise to expose a flat surface, in which grooves (23, 24) are cut to receive the synthetic fibres (25, 26), after which the cut section (21) of timber is replaced and fixed with screws (27). The synthetic fibres are of glass or carbon, or a mixture of these.
