Abstract (en)
[origin: DE19931826A1] The invention relates to a method and device for operating an internal combustion engine (1), especially of a motor vehicle, according to which fuel is directly injected into a combustion chamber (4) in at least one first operating mode during an intake phase or in a second operating mode during a compression phase, and the internal combustion engine is controlled and/or regulated differently according to the operating mode. In order to improve the change-over between two operating modes, the rotational speed N of the internal combustion engine (1) is regulated during the change-over process.
