Abstract (en)
[origin: WO0110168A2] A loudspeaker has a bending wave panel (11) and an exciter (13) mounted on the panel to excite bending wave modes in the panel. A rear box (15) defines a cavity (17) in cooperation with the panel (11). A resonance of cavity and panel at a coupled mode resonance frequency may be controlled by providing a duct (19) coupled to the cavity to selectively reduce sound pressure at the coupled mode resonance frequency. Damping (21) may be provided in the duct (19).
