Abstract (en)

[origin: EP1201378A2] The arrangement has a control cam (12) with a spiral driven by an electric motor (13), if appropriate via a gearbox, and engaged by a drive pin joined to a stop plate (4) for parallel displacement of the stop plate. The cam is connected without play to a potentiometer or pulse counter (17,18) for accurate rotary position detection of the control cam and hence of the stop plate.
