Abstract (en)

[origin: EP1201589A2] The conveyor for magazines is fitted with pockets whose height can be adjusted using an adjuster rod (250) with teeth (254) which cooperate with a cogwheel (140). This is held in place by a locking ring (160) which can be released by unfastening a catch (209) to allow the height to be adjusted. Independent claims are included for: (a) a pocket as described above; and (b) a method for adjusting the height of a pocket using the adjuster.
