Abstract (en)

A combustible material (2) for a candle (1) with a wick (3) has an ignition point above 200 degrees C, and of 225 degrees C or over measured in a closed container. It is made from at least one mineral oil with an ignition point above 200 degrees C, or at least 80 per cent of a mineral oil mixture with a first oil having an ignition point above 200 degrees C, and a second oil of lower viscosity than the first, combined with less than 20 per cent of a polymer such as a tri-bloc copolymer.

Abstract (fr)

Matière combustible (2) pour bougie (1) caractérisée en ce qu'elle présente un point éclair dont la température est supérieure à 200°C. <IMAGE>
