Abstract (en)  
[origin: WO0111983A1] An improved process for providing an individually customized fresh brewed coffee beverage on demand by a consumer, in a wide range of variety and strength. Said brewing process is useful for making relatively large quantities of fresh brewed coffee beverages (in particular customized as to desired variety, body, character and/or strengths) as chosen by multiple individual consumers just prior to their consumption. Said process is easy to use by the consumer or other individual (i.e., restaurant wait staff) obtaining the customized beverage. Further, maintenance of the equipment requires only a small amount of personal attention by the owner/operator of the equipment. Such brewing process apparatus which is particularly useful for providing coffee according to individual consumer selection, but in large, commercial or institutional quantities. "Delayed dilution" of a concentrated extract is utilized to provide a beverage brewing system which immediately (upon customer selection) provides selective dilution (based on individual consumer's selections) of a fresh brewed coffee extract <u>after</u> the extract has been allowed to brew and held as an extract before dilution. The concentrated extract has a brew solids level greater than 1.2% and a Delta Standard yield of less than 8%.
