Abstract (en)

[origin: FR2796542A1] The pressure cooker lid (10) is inserted into a re-entrant edge (4) of the pan and hermetically closed with a seal (11). The seal and the re-entrant edge are shaped so that in the event of an over pressure the lid is abutted against the re-entrant edge over one or more sectors of the periphery of the rolled edge (13,13B) leaving the joint free to locally deform.
