Abstract (en)
[origin: FR2796921A1] The invention concerns a device for dispensing a fluid product comprising a fluid product reservoir (10), a dispensing member (10), such as a pump mounted on said reservoir (10), and a dispensing head (20) provided with a dispensing orifice (31), mounted on said dispensing member (20) so as to be mobile between a normal position and a dispensing position. The invention is characterised in that the device comprises a closure system (40) fixed to said reservoir (10), comprising a closure element (41) adapted to seal from outside the dispensing orifice (31) in a normal position of the dispensing head (30), said closure system (40) further comprising communication means (42), such as an opening co-operating with said dispensing orifice (31) in dispensing position of the dispensing head (30) for expelling the product through said dispensing orifice (31).
