Abstract (en)
[origin: EP1078703A1] Continuous casting machine consists of two parallel arranged casting rollers (1, 2) forming a casting gap (6) limited by narrow side parts (5), and a stand (3) carrying the rollers. The rollers have cooled balls which form the casting gap and journals (8, 9) for supporting the casting rollers on the stand. The cooled balls consist of a cylindrical casing which is supported using concentric support rings on an axis fixed to the stand. Preferred Features: A toothed crown is fixed to the support ring.
