Abstract (en)

[origin: WO0108042A1] The invention relates to a method for accessing data objects (a1a, a1) during which a first application program (12') submits requests (ANF) to the databank system (16') in order to access data objects (a) of a source class (A) having a predetermined data structure. A second application program (14') submits requests to the databank system (16') in order to access data objects (a1) of a data class (A1) derived from the source class (A). Only data objects (a1a, a1) of the derived data class (A1) are stored in the databank system (16') itself.
