Abstract (en)

[origin: DE19937708A1] The invention concerns a method whereby for a subscriber terminal device (CPE) linked by analog connection to a digital telecommunication exchange, a permanently available narrow band data transmission link is established between the subscriber terminal device (CPE) and a data transmission network (DN) connected to the digital telecommunication exchange (EXCH) of a public telephone network. For data transmission link, the mobile telephone network does not need to switch onto a useful channel.
