Abstract (en)  
[origin: US2002040883A1] A bottle for beverages (FIG. 1) has a body (1), in which base (4) there is, from the bottom end, a deep recess (5) creating in the base (4) of the body (1) the double coating (6) surrounding the recess (5). The recess (5) at its inlet is equipped with a catch (7). Inside the recess (5) there is placed at least one dispensable cup (K) caught by its molded rim (8) just behind the catch (7) of the recess (5). In the double coating (6) of the base (4) of the body (1), from its bottom end, there are two opposite to each other thumb notches (10) with widths enabling the taking the cup (K) off from the recess (5). In the type of the bottle according to the invention (FIG. 2) the base (14) of the body (11) is shaped in the manner that it forms the double coating (15) and the bottle's chamber (17), where the said bottle's chamber (17) has the shape of the cup (K). Between the outer wall (18) of the double coating (15) and the lateral surface of the bottle's chamber (17) there is the recess (16). Inside the recess (16), at its bottom, in the inner wall (18) of the double coating (15) there is formed a catch (19) embracing the molded rim of the cup (K) placed inside the recess (16).

Abstract (de)  
Getränkeflasche mit einem Flaschenkörper (1) in dessen Flaschenboden (4) eine Vertiefung (5) ausgeformt ist. Die Vertiefung (5) bildet aus dem Flaschenboden (4) des Flaschenkörpers (1) einen diese Vertiefung (5) umfassenden doppelwandigen Mantel (6). Die Vertiefung (5) ist an ihrem Einlauf mit einer Haltenase (7) versehen. Innerhalb der Vertiefung (5) ist mindestens ein Becher (K) untergebracht. Der Becher (K) ist mit einem aufgestellten Kragen (8) in der Vertiefung (5) dicht hinter der Haltenase (7) schnappgehalten. Im doppelwandigen Mantel (6) des Flaschenbodens (4) des Flaschenkörpers (1) sind seitens des Flaschenbodens zwei gegenüberliegende Aussparungen (10) geformt, deren Breite das Herausziehen des Bechers (K) aus der Vertiefung (5) ermöglicht. <IMAGE>
