Abstract (en)

Apparatus for the orientation of tubular products (2) having a portion provided with elastic band (20), comprising a plurality of rollers (1a; 1b) on which said portion with elastic band (20) is to be fitted, the said rollers (1a; 1b) being disposed on two opposite fronts with respect to a longitudinal plane of symmetry (L-L) and being associated with corresponding actuators (3a; 3b) which drive them into rotation about respective longitudinal axes, characterized in that at least one of said rollers is motor-driven; that said rollers (1a; 1b) are mounted on corresponding supports (5a; 5b); that at least one of them is movable to and from said plane (L-L); and that the said rollers (1a; 1b) are inside a conduit defined by said supports (5a; 5b).
