Abstract (en)
[origin: EP1203856A1] An intermediate connector (3) between a covering section (2) and a base (1), is provided with a cavity to receive the tab head (211) at lower side of covering section through an opening (32). An internal tab (35) in the connector, retains the head. The connector is clipped in a gully (11) provided in the base. The gully depth is greater than height of the connector, so as to adjust the joint cover height. An Independent claim is included for intermediate connector.
