Abstract (en)

Method for adding service data for a service to an apparatus comprising a memory and a processor, using at least one read/write device for reading data from and writing data to the apparatus, comprising the following steps of: performing one or more checking steps; reading data pre-stored in the memory of the apparatus in order to gain access to an empty memory part which is necessary for additional placing of data and/or instructions to be added; writing to the memory data and/or instructions to be added, characterized in that the service data is fed from at least one central databank to the read/write device. <IMAGE>
