Abstract (en)

[origin: WO0113858A1] The invention relates to a rehabilitation device for the vertebral column. Said device comprises a frame (3) and a bearing surface (1) for supporting the body, in addition to a prehensile device (9) for grasping the pelvis. The prehensile device is mounted on the frame (3) using a tappet (6), whereby the tappet axes (7, 8) run transversely to the bearing surface (1) and the tappet (6) is driven by a slow-speed motor (4).
